CLOUD & PLATFORM ENGINEERING | DEVOPS & SECURITY

SUMMARY

System Ops Engineer with professional experience since January 2021 in infrastructure troubleshooting, operational automation, and recovery documentation. Independent AWS and Kubernetes projects demonstrate Terraform provisioning, secure delivery workflows, incident investigation, and verified database recovery.

CORE TECHNOLOGIES

Cloud & infrastructure: AWS, EKS, VPC, IAM, S3, Terraform, Linux, Docker, Kubernetes

Automation & delivery: Python, Bash, Go, Git, GitHub Actions, Argo CD, Helm

Security & observability: Kyverno, RBAC, Trivy, Cosign, Prometheus, Grafana, CloudTrail

PROFESSIONAL EXPERIENCE

Galoof & Associates | System Ops Engineer | Roxbury, Boston, MA

January 2021 - Present

- Resolved operating system, network, access, application, and endpoint issues supporting tax-office operations and internal users.
- Automated recurring maintenance, monitoring, backup, and configuration tasks to make routine administration repeatable.
- Maintained weekly backups, recovery procedures, and five operational checklists covering health checks, preventive maintenance, and system readiness.

OPERATIONAL LABS & INFRASTRUCTURE

Independent projects | Source code and validation evidence on GitHub

EKS Operations & Resilience | AWS, Terraform, Kubernetes, Prometheus

- Provisioned an AWS operations environment with Terraform across two Availability Zones, including VPC networking, EKS managed node groups, IAM, and monitoring.
- Tested a staged cluster upgrade; recorded 9 HTTP 502 responses across 26,611 requests. A separate controlled drain with readiness gates and spare capacity recorded zero failures across 4,030 requests.
- Narrowed workload S3 permissions while preserving intended reads; verified denied private reads and writes with CloudTrail evidence and documented recovery procedures.

ForgePath Developer Platform | Backstage, Argo CD, Docker, Prometheus

- Built a local self-service workflow connecting service scaffolding, validation, signed container artifacts, and Git-based digest promotion to Kubernetes delivery.
- Enforced deployment controls with Kyverno, restricted workloads, and default-deny networking; tested rejection of noncompliant configurations.
- Contained a defective canary at 5% exposure in a local incident exercise using Prometheus analysis and Argo Rollouts; documented human-approved Git recovery and postmortem findings.

KubeBackup Operator | Go, PostgreSQL, Kubernetes, GitHub Actions

- Automated PostgreSQL backup and restore Jobs with checksum verification, restricted containers, least-privilege RBAC, and Prometheus backup-health metrics.
- Validated controller behavior with 21 specs and Kubernetes operation with 3 Kind end-to-end specs, including exact restored records; published a signed release with SBOM and digest-pinned installer.

CERTIFICATIONS

AWS Certified Solutions Architect - Associate | 2024

AWS Certified SysOps Administrator - Associate | 2025

Certified Kubernetes Administrator (CKA) | 2025

CompTIA Security+ | 2025
